DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
 2. Ascertaining the differences between the prior art and the claims at issue.
 3. Resolving the level of ordinary skill in the pertinent art.
 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
1. Claim 9 is rejected under 35 U.S.C. 103(a) as being unpatentable over WO 97/21788, hereinafter "WO". WO discloses a process for producing an oil derived from a Fischer-Tropsch reaction product comprising contacting the F-T reaction product with a hydrocracking/hydroisomerization catalyst; followed by separating a bottom fraction from the hydrocracked/hydroisomerized product; followed by subjecting the bottoms fraction to a dewaxing step to reduce the pour point of the oil to about -18 degrees C (see WO, page 11, first paragraph and claims 1 and 2).

WO does not disclose where the pour point is below -20 degrees C.

Art Unit: 1764

However, it would have been obvious to one skilled in the art that "about -18 degrees C" would overlap, or at least have the same properties as, a pour point of -20 degrees C (see MPEP 2144.05I.).

Therefore, it would have been obvious to one having ordinary skill in the art at the time of the invention to modify the "about -18 degrees C" with 20 degrees C because there is no patentable distinction between the two limitations.

Allowable Subject Matter

2. Claims 1-8 are allowed.
3. The following is an examiner's statement of reasons for allowance: the prior art does not teach or disclose a silicon rubber composition comprising a Fischer-Tropsch derived oil.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
